

FOR IMMEDIATE RELEASE

**Rantizo partners with EFC Systems' FieldAlytics Platform
Integration will offer drone application service providers streamlined workflow and compliance data**

Brentwood, TN July 19, 2022 – Rantizo, a precision ag company focused on providing drone application systems and services, announced today a partnership with EFC Systems to integrate their FieldAlytics software into the workflows for drone application. Customers of both companies will have access to the integration starting next year.

The integration will provide a backbone for work-order creation, dispatching and compliance data collection of custom-application work being conducted by drones. Both companies view the partnership as a natural alignment in meeting today's needs of both Rantizo's and EFC Systems' customers, while looking ahead to the future of the industry.

"We're pleased to partner with Rantizo," said Ernie Chappell, President and Founder, EFC Systems. "This is another example of data interoperability helping to drive efficiency for service providers and growers."

FieldAlytics will expand compliance capabilities for Rantizo application partners by giving them access to multiple data sources within the agronomy operation platform. As drone service work orders are completed the application data will transfer seamlessly back into the FieldAlytics platform for data management and compliance records.

"Rantizo is committed to making drone application safe, efficient, and legal," Rantizo's CEO, Matt Beckwith explained. "Integrating with FieldAlytics will streamline operations for our service providers while offering Rantizo's compliance and reporting tools. We're simplifying life for operators who embrace the future of drones."

About EFC Systems, Inc.

EFC Systems delivers comprehensive solutions for Agribusiness Retailers to manage their operations and enhance their value to Growers. EFC Systems' product suite includes both financial (ERP) and Digital Agronomy platforms that help strengthen the Retailer/Grower partnerships. The Merchant Ag and FieldAlytics suites support operating procedures that drive efficiency and help manage risk while being highly connected to other platforms for data interoperability.
